

SXAR1 Product Advisory

Date: January, 2018

-Description-

If your SXAR1 has been stored for an extended period of time without charging, the battery may become fully discharged. **If the battery has been fully discharged, and the power button is pressed BEFORE charging, the device will NOT turn on and will no longer function.**

-Prior to Use-

If your SXAR1 has been stored for an extended period of time and you are unsure of the charge level of the battery, DO NOT TURN ON THE DEVICE. Instead, charge your stored SXAR1 for a minimum of 2 hours before it is turned on. The best practice to avoid a fully discharged SXAR1 is to charge the unit until the green battery indicator light is illuminated, indicating that it has been fully charged. Upon confirming the green battery indicator light has been illuminated, the SXAR1 may be powered on.

-After Use-

Do not store the unit in a discharged state. Always charge your unit for a minimum of 2 hours before storing it for an extended period of time.

If you require any further technical assistance, please contact Aviation.Support@siriusxm.com.

Safe Flying!
